

Job description

Software Engineer

Company context

INTO's mission: Transforming international student academic and career success through exceptional university partnerships.

INTO University Partnerships is an independent organisation committed to expanding higher education and career opportunities for students across the globe.

We believe in the power of education to transform lives. We believe that movement of students leads to movement of ideas, which in turn creates better and more successful societies.

We connect students seeking quality international education with leading universities worldwide aspiring to widen their global reach and impact. Achieving the best learning experience and career prospects for students is central to our mission.

Since our inception in 2005, INTO has pioneered innovation in international education and created groundbreaking partnerships with 30 universities in the US, UK and Australia. We have so far helped more than 130,000 students from 190 countries realise their dream of achieving a degree from a world-class university. We also equip students to get a head start in building a career. We do this by offering exceptional academic and employability skills programmes.

We are active in over 120 countries and provide unrivalled personalised service to international students with more than 1,500 experienced staff worldwide and a global network of 2,000 recruitment partners.

coding to encompass proactive problem-solving, continuous integration, and the optimization of software performance.

Job purpose

We are seeking a Software Engineer to join one of our Scrum teams and enhance our delivery capability. In this role, you will be part of a team that deploys multiple times a day via CI/CD pipelines to our globally distributed Kubernetes clusters. Using an event-driven, microservices-based architecture, we build and maintain products used by thousands of users.

You will collaborate with Product Managers to design and implement features that align with product objectives while adhering to quality and architectural standards.

As a member of an empowered Scrum team, you will actively contribute to the development and support of our products, influencing their direction and evolution.

This is a hands-on, full-stack development role. Our tech stack includes .NET 8 and 9, Next.js, and Azure. While we currently have several products built in Angular, we are gradually transitioning them to Next.js.

Key accountabilities and duties

Role and responsibilities

- Participating in multi-disciplinary, Agile teams creating Digital solutions.
- Translating user stories into functioning applications.
- Creating and maintaining efficient, reliable and testable code in line with coding standards.
- Delivering systems that meet performance and quality goals.
- Staying up to date with technology developments.

Location

The post is based in Bangalore, India. Occasional travel to UK may be necessary and flexibility is required to meet the demands of the post.

Safeguarding

As part of our safeguarding procedures, applicants are asked to note that:

- references will be followed up;
- all gaps in CVs must be explained satisfactorily;
- proof of identity and (where applicable) qualifications will be required;
- reference requests will ask specifically whether there is any reason that they should not be engaged in situations where they have responsibility for, or substantial access to, persons under 18;
- appropriate suitability checks will be required prior to confirmation of appointment.

This role may meet the requirements in respect of exempted questions under the Rehabilitation of Offenders Act 1974. If so, all applicants who are offered employment will be subject to a Disclosure and Barring Service check before the appointment is confirmed. This will include details of cautions, reprimands or final warnings as well as convictions.

Please see the next page for person specification...

Person specification

	Essential	Desirable
Education/ qualifications	A degree in Computer Science, Computer Engineering, Mathematics with Computer Science or demonstrate the relevant experience.	
Experience	Minimum 4 years of experience in web application development	
Front-end Technologies	React or Next.js experience is required. Angular experience is a plus	
Back-end Technologies	Good hands-on experience towards C#, .NET Core is required	
Other Technologies	Git, any cloud technologies preferably Azure	Docker, kubernetes, Cosmos DB, CI/CD, terraform
Engineering	Can take medium-sized user stories and work under own initiative, breaking the story into sub-tasks independently. Can work on larger user stories with input from Senior/Lead Software Engineer. Ensures that departmental coding standards and principles are followed. Where coding standards are not understood seeks to proactively gain the knowledge and understanding. Proactively escalates where coding standards and principles are not able to be followed ahead of non-adherence to these. Able to define and write appropriate tests (unit / integration) before releasing functionality.	

Technical Design	Able to design units of functionality. Can come up with design suggestions for larger systems to be agreed with Senior/Lead Software Engineers. Demonstrates accountability and ownership of their own solutions.	
Design Patterns	Able to implement common patterns and equipped to research and learn new patterns when they encounter new problems.	
Agile	An understanding of Agile (Scrum) and how to contribute to a Scrum team. Participation in stand-ups, backlog refinements, and sprint planning. Accurate task-board discipline. Quick to raise impediment and seek the help of others during a sprint. Contributes to the improvements in process. Participates in debates on team health; suggests changes in team/individual behaviour to correct any problems. Has the courage to say when something is not right and equally to take the initiative to do something about it.
